WHAT DID THIS PAPER CONTRIBUTE?

- Jegede and Aikenhead examined how pupils move between their everyday culture and the culture of school science.
- They reviewed collateral learning theory, explaining how pupils cope with conflicting worldviews.
- They proposed the teacher as a ‘culture broker’, supported by culturally sensitive curriculum and assessment.

Jegede and Aikenhead (1999) · Research in Science & Technological Education · doi.org/10.1080/0263514990170104

WHAT HAS CHANGED, AND WHY IT MATTERS

- More than 25 years on, debates about Indigenous knowledge, culturally responsive teaching and equity give it renewed relevance.
- The paper still challenges assumptions about whose knowledge school science privileges.
- Can science be made accessible without asking students to abandon their cultural identities?
